

## Pencil Mode

- Draws in a graphite-gray color
- Dropdown menu allows user to change the size/wide

## Pen Mode

- Dropdown menu allows user to change the size and color
- Draws in selected color + size

## Undo

Removes most recent drawn item

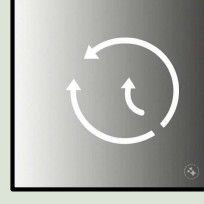

## Highlighter Mode

- Dropdown menu allows user to change the size and color
- Highlights in selected color + size

## Eraser Mode

- Dropdown menu allows user to change the size
- Erases all items that touch dotted circle

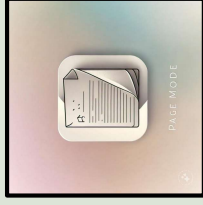

## Reset

Clears all items from canvas

## Preloaded Shapes Mode

- Prompts user to input desired radius and number of points for a regular polygon
- Format: {radius},{# of points}
- Double click on canvas to generate + place regular polygon

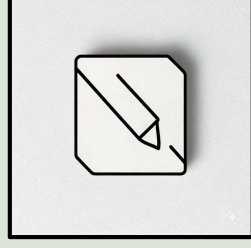

## Page Mode

- Each time user selects, the background page format rotates
- 3 page modes: blank, lined, graph

## Lasso Mode

- Allows users to circumscribe items on screen to move them
- Must return back to original position where mouse first clicked to complete circle
- Move selected items freely around the canvas using the up, left, down, + right arrow keys (w, a, s, d respectively)
- Click anywhere outside of the dotted circle to unselect the current lasso

## Shape Autocorrect Mode

- Allows users to draw shapes that "snap" into perfect ones
- Must return back to original position where mouse first clicked to complete shape
- As user drags the cursor, release to place down corners/focal points and re-press to continue dragging to complete intended shape
- Shape drawn based on # of green focal points (i.e. 0 = circle, 1 = line, 2 = triangle, etc.)
